

**Do you have a logical mind?
Do you know how to simplify a
program? Come and take up
the challenge by taking part in
a programming challenge with
Matatalab!**

Teams of 4 students compete in a programming challenge with robot designer Matatalab. The robot must be programmed to draw geometric figures and make routes to collect pawns on a checkerboard. Each figure or course yields points according to its complexity. The goal is to make the most of successful exercises in a limited time of 20 minutes.

Drawing

1 point per completed figure, to be validated by the referee

The figure must remain within the drawing area

Some reminders of geometry

The sums of the angles of a triangle is always 180°
